In Case You Missed It!

Setex Technologies is the first commercial manufacturer of dry adhesive technology providing polymer-based microfiber dry adhesives for a wide range of product applications. Our monthly featured articles are gathered for you below.

The Benefits of Partnering with Setex Technologies

A variety of industries have discovered the benefits of partnering with Setex Technologies. Years of academic research, which set out to examine how a gecko

can defy gravity, gave birth to Setex®. Our technology can be used for a wide range of product applications. It can also be customized to provide innovative adhesive and gripping solutions to your product designs.

The Science Behind Setex Technologies

The approach of asking how and why actions in nature are possible has led to innovations that solved complex human inquiries for centuries. Leonardo da Vinci, a painter, sculptor, inventor, scientist, theatrical set director, puzzle-maker, and more often began his research with this simple question. His well-documented journals are filled with such inquiries as, how do birds fly or how do fish swim. Over his life, he had thousands of questions on how nature worked.

In a similar fashion, the science behind Setex Technologies was inspired by a question proposed by one of the many wonders of nature. “How do geckos defy gravity?” Our research and scientific experiments that set out to answer this question gave birth to Setex Technologies.

A Dive Into the Wearables Industry

In taking a dive into the wearable industry it's obvious that everything old is new again. Wearables per se are not new. People have been wearing, eyeglasses, hearing aids, watches, and jewelry for centuries. Over time some wearables have faded out of fashion only to be re-invented and born again as a popular accessory. Today, eyewear can not only help you see but technology advancements provide protection from harmful UV rays, glare, light weighting and unique designs. Setex Technologies provides a new advancement in gripping technology based off the Gecko's foot to keep your glasses on your face!
